Mida vajab sõjas olev riik?

- Üksuste varustamiseks (sustainment) on NATO ja tema liitlased kokku leppinud süsteemi, kus varustus on jagatud varustusklassideks:
 - CL I – toit & vesi, loomasööt, medikamendid
 - CL II – varustustabeli järgne varustus (relvastus, tehnika, sidevahendid jne)
 - CL III – kütused ja määrdeained
 - CL IV – tõkestusvahendid ja muu varustustabeli väline varustus
 - CL V – lahingumoon
- Sõja pidamiseks on eeldus, et on olemas varustustabeli järgne varustus (CL II) ja jätkub piisavalt varusid (CL I, III, V).
 - **Varude osas on kriitiline CL V**, mis on ka kõrgeim prioriteet kõikidest varustuselementidest.
 - CL I ja III osas on pigem küsimus rahas kuna need on lihtsasti turult kätte saadavad.
